WordMaster

Word Processing: from PolyMorphic Systems

PolyMorphic Systems has announced a new text formatter called WordMaster. Formatting commands included in WordMaster allow the user to set all margins, right and left justify text, initiate and position automatic page numbering, alternate headers and footers with odd and even pages, and control indentations. It will also center, capitalize, and underline. In conjunction with the two dimensional text editor, the user now has control over all aspects of document preparation.

WordMaster is available on disk with a 125 page self-teaching manual. Special features permit the beginner to quickly find and correct formatting errors.

A PolyMorphic System 8813 or 8810 with 16K memory and printer is required to use WordMaster. The complete package is now available at PolyMorphic System's dealers. Call or write for the name of your nearest dealer.
