1437 Sugarwood Lane   Norcross GA 30093   404/925-2480

Introducing....

The Poly Peripherals Hard Disk III

This is the first cost-effective hard disk system available for a PolyMorphic 8813 or 8810 computer system. The Poly Peripherals Hard Disk III is available in configurations up to 15 megabytes formatted (18 megabytes unformatted — same as the PolyMorphic Systems HD/18). A 5 megabyte hard disk will hold 19,582 sectors of data.

Access time of a Winchester disk (also known as a fixed disk or hard disk) is incredibly fast. Your programs will read data faster than ever before.

All of your existing Poly programs will run using the Poly Peripherals Hard Disk III. The hard disk appears to the system as one or more new "drives," and can be accessed by programs just like any of your floppy disks.

The Poly Peripherals Hard Disk III uses components which are recognized as "the best in the business." Only by using field-proven, cost-effective components could this subsystem be produced at such a low price. The Hard Disk III includes a Xebec hard disk controller and host adapter, and a 5-, 10-, or 15-megabyte MiniScribe Winchester drive.

The following disks are available:

5 megabyte	$1990
10 megabyte	$2290
15 megabyte	$2390

All prices include shipping to the continental United States. Poly Peripherals hard disk subsystems come with cables, installation instructions, and all necessary device driver software.

The Poly Peripherals Hard Disk III is available for use with any single-user PolyMorphic 8813 or 8810, running under Exec and Volume Manager. Your CPU card must contain version 81 ROMs or later. ROMs and the latest release of Exec are available from PolyMorphic Systems, Santa Barbara CA.
