New screen editing features

CBM
Word Processor

CBM™

MICROCOMPUTER

MEETING THE NEEDS OF PROFESSIONALS.

COMMODORE BUSINESS SYSTEMS.
Now that's smart thinking.

10 GREAT FEATURES MAKE IT ONE GREAT WORD PROCESSOR.

The CBM microcomputer based word processor offers a number of outstanding features that add up to make it one great word processor for your business.

The green, high resolution CRT screen provides precise, easy-to-read letters, contracts, presentations, etc.

Commodore is recognized as Canada's leader in the microcomputer market.

Intelligent, compatible peripherals allow your computer to expand as your needs do.

Simple to operate with a minimal amount of training.

Serviced by expert technicians who can solve any problem should it occur.

Lightweight and portable, the CBM word processor has no location or temperature restrictions.

CBM products are carried by a Canada-wide network of computer dealers.

Designed to fit compactly on a single office desk.

Competitively priced at under \$10,000.

In addition to word processing, the CBM microcomputer has various applications that can be programmed to your specific business requirements.

"The Commodore CBM microcomputer is the most effective, versatile, and efficient word processor in its price range. In our personnel business, the word-processing capabilities in itself justified the purchase of a CBM. We can produce resumés for example, at a touch of a button. Quickly, accurately, and letter-perfect. Letters, documents, and other correspondence can be corrected, and edited, without wasting secretarial time, and paper, on a total re-type.

We have also developed a tailored software program that can access immediately any personnel within our system by specialized field; education; salary range; and over one hundred other criteria. And we are now investigating the transference of all accounting procedures to our CBM.

The CBM microcomputer is simply a great buy. Our company is just beginning to discover its potential."

Eric Hindson
HRC Human Resource Management Limited

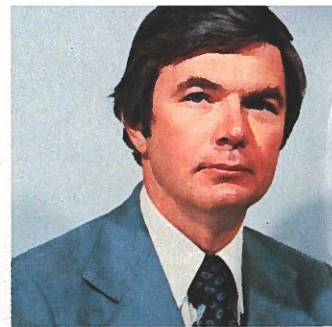

WHAT IS A WORD PROCESSOR?

If everything we wrote came out picture perfect the first time round, there'd be little need for word processors. However, we all make errors. Fortunately though, it's our habit to revise and rewrite because we know we can do better. And that's where a word processor comes into play. Or work.

As an example, let's look at the CBM word processor. As your text is being typed out it is simultaneously memorized and printed out on the video screen. If you notice a typographical error it can be corrected by a simple command from the keyboard.

Or, after having drafted a 300 word document you may decide to revise the first paragraph, delete the second and keep the third as is. No problem. Just use the simplified editing procedure on the keyboard to make those changes. And you haven't wasted a single sheet of paper.

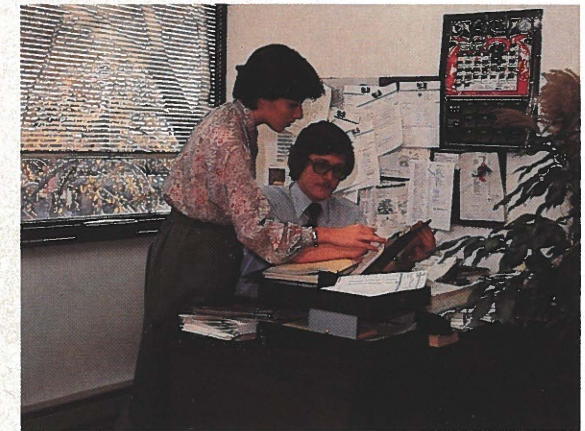

Because the CBM word processor allows the text to be stored and retrieved, it's the perfect device for the businessman who needs to maintain an updated customer list or a revised price list for his inventory. Or he may want to write a personalized letter to his 2000 past customers. With the CBM word processor, they're simple easy tasks.

GET YOUR WORDS WORTH.

If you or your firm is in the market for a high quality, easy-to-use and affordable word processing system, then a CBM is the logical choice. Not only will you be saving time and money but you'll probably end up with much better written material. And besides getting a word processor you'll end up owning a complete, fully integrated microcomputer that can be programmed to suit your everyday business or professional needs.

If you'd like more information on the word processing capabilities of the CBM microcomputer, call or write Commodore's nearest District Sales Office.
